The company **Aquasanita** is one of the most well-known producers of granite sinks on the market. More than 80% of its products are exported to over 30 countries around the world. Aquasanita sinks meet the most demanding requirements for processing and quality of workmanship. Currently, Aquasanita is giving its sinks a new name **HELIKA**. With the idea of **living life at a slower pace** in harmony with nature. Therefore Helika, translated as snail. Helika products are designed to support a slower lifestyle and create a warm, caring atmosphere in kitchens.

The best-selling sink manufacturer Aquasanita introduces its new premium TURL® GlossyCoat range.

Very high-quality **Turtl Quadro 565 sink**, which with its simple and refined look is ideal for stylish kitchens. It fits perfectly in both rustic and modern kitchens. This sink model is particularly suitable for smaller kitchens.

The Turtl Quadro 565 sink is designed for a cabinet with a minimum width of 60 cm. The sink's depth (20 cm) is sufficiently spacious for comfortable washing of large dishes. You will certainly be pleasantly surprised by the sink's accessories.

Eccentric drain control, its task is to make using your kitchen sink easier. You place this eccentric next to the faucet in a pre-drilled hole, see photo. It allows you to drain water with dry hands - just by turning the eccentric control. There is a mesh installed in the sink drain, which serves as a sink plug at the same time. Simply by turning the eccentric control, this mesh can either close (plug function) or lift and the

water can easily drain. If you don't want to use this eccentric control, you don't have to. In the pre-drilled hole, you can place, for example, a built-in soap dispenser. You will then manually control the sink drain.

The package also includes a **metal grid** for the sink, which protects the sink from wear. When using the sink, there is no need to remove the grid, water drains beautifully into the drain.

This sink is made of very **high-quality materials, it is 100% non-porous, hygienic**. The material of the sink provides protection against limescale and any deposits or stains. The sink also has resistance to high temperatures. The sink is permanently colored, meaning it will maintain its beautiful white color even after several years. One of the greatest advantages of ceramic sinks is their long lifespan.

The main advantage of Turtl sink production technology is the stronger durability of the **protective gel layer** and its extreme hardness. Turtl sinks with a gel coating withstand high mechanical external influences and are resistant to impacts. The innovative mixture and advanced polishing processes ensure that the surface of the sink is precisely polished to a mirror shine. The sink meets the highest quality standards. Turtl sinks have excellent resistance to discoloration. The surface shines and the bright white color lasts for years.

TURTL® GlossyCoat surface treatment

GlossyCoat is composed of gel polish that creates an extremely hard protective layer, which provides exceptional strength to the sink surface. The advantage of gel polish is its homogeneity, which prevents the accumulation of microbes and bacteria on the surface. During production, GlossyCoat is applied to the sink in a shell-like form, in which the sink is encapsulated. The inner part of the sink is made of robust artificial stone. Resin in combination with a thick layer of Coatu gel creates extremely durable Turtl sinks, setting a new trend in kitchens.

Key features of the AQUASANITA TURTL QUADRO 565 kitchen sink
